## Time Fix

### **Picture Instruments is releasing the new software „Time Fix“**

*Being faced with the wrong camera time setting can be a nuisance in several ways. Be it because your holiday pictures end up having the wrong date or because the time is incorrect due to a wrong time zone.*

If multiple cameras were used at an event like a wedding and you wish to merge all images into the correct order, an offset of a few minutes can cause a big problem and result in the wrong order of the images.

Thanks to “Time Fix” by Picture Instruments such problems can now be fixed easily.

Simply load as many images as you like into the software and set the desired time difference by years, months, days, minutes and seconds as well as a different time zone in hours. You can check the old and new shooting time in the list view before the EXIF-data of all loaded images can be corrected with the click of a button.

If you have locked the stable door after the horse has bolted, Time Fix can be a useful little helper.

#### **Availability**

The software is sold through the manufacturers online store for \$25, an investment that pays for itself. A free unrestricted 14-day trial version is available on <http://picture-instruments.com/support/downloads.php> for download.
