

Docma Freistellen for Photoshop - now also as a UXP plugin

Just in time for the release of the new UXP plugin technology for Photoshop, Picture Instruments was able to convert the successful Docma Freistellen extension from the old CEP technology to UXP. Docma Freistellen is based on the entire expert knowledge of Olaf Giermann to make the background removal process in Photoshop easier for you.

New in app plugin in Photoshop

Adobe officially introduced the new UXP (Unified Extensibility Platform) technology for Photoshop at MAX 2020. With this new technology, plugins now run even more natively in Photoshop. Apart from the future-oriented technology, plugins are now managed directly in Photoshop and installed via the Creative Cloud Desktop App. In addition to the new Picture Instrument Toolbox plugin, the popular Docma Freistellen plugin will also appear just in time for MAX and the release of Photoshop version 22.

The concentrated knowledge of Photoshop expert Olaf Giermann in one plugin

With the Docma Freistellen plugin you benefit from Olaf's years of experience in removing backgrounds in Photoshop. Olaf is the editor of the Photoshop expert magazine Docma for years and is confronted with this topic almost every day. Regardless of whether you need to remove the background for advertising photography or fantastic digital art is your passion, with Docma Freistellen we have developed a tool that makes background removal in Photoshop easier than ever. Even if you are already a pro the Docma Freistellen plugin will accelerate your workflow and you won't want to work without the plugin after a short period of use. Docma Freistellen is designed to have quick access to all the necessary functions and tools for selecting and masking with just one click. So you

can easily switch back and forth between the useful tools. From the standard tools in the basic area, to complex channel calculations, to fur and hair brushes, with which you can easily paint over areas without contrast. Everything is in this plugin!
