

Press Release Nov 26th, 2024

Popular Picture Instruments Color Grading Plugins now available for DaVinci Resolve

Get professional results quickly without complicated workflows

The well-known Picture Instruments Color Grading Plugins (Log)-Neutralizer, Theme Wheel, Warping Wheels, LUT Mixer and Color Cone are now available for the professional video editing software DaVinci Resolve. The integration of these tools now gives

DaVinci Resolve users all the benefits of Picture Instruments plugins that were previously reserved for users of Premiere, After Effects, Final Cut Pro X and Photoshop.

Simple workflow, limitless possibilities

DaVinci Resolve has become the most popular program for video editing in recent years. For producers who are new to DaVinci Resolve, these plugins simplify color grading immensely. Professionals also benefit from achieving outstanding results efficiently, which can be refined even further with the powerful Node Editor. “By connecting our color grading tools to the OFX interface, we want to support colorists and creative professionals in realizing their visions straightforward without leaving DaVinci for time-consuming round trips,” explains Robin Ochs, Managing Director at Picture Instruments. Thanks to the seamless integration and intuitive user interface, the tools can be used directly without a long training period.

- **The perfect basis for professional color grading:** (Log)-Neutralizer makes it possible to convert LOG footage respectively flat color profiles. Color casts are also neutralized. The plugin analyzes the image so that unwanted clipping, which can quickly occur when using LUTs, is simply avoided.

- **A source of inspiration:** The Warping Wheels Look Generator opens up a wealth of creative possibilities at the touch of a button. The thematically selected looks of the Theme Wheel are specifically tailored to certain moods or genres. This allows unique visual concepts to be realized purposefully.
- **Quick editing of skin tones:** The plugins Color Cone, LUT Mixer and Warping Wheels have helpful controls for editing and protecting skin tones and deliver professional results without masking and complicated work steps.
- **Intuitive control of colors and contrast:** Thanks to the Warping Wheels' additional wheels for skin tones, plant green and sky blue, impressive results can be achieved even without much prior knowledge. The special contrast wheel sets itself apart from conventional contrast controllers as it adds another dimension to contrast editing, providing more depth and precision.
- **Increased precision in color correction:** Thanks to Picture Instruments' own Color Warp technology, Color Cone offers maximum control for both color correction and creative color grading. The clever transformation from source to target colors makes even strong color changes look harmonious.
- **Unlimited creativity when working with LUTs:** With LUT Mixer, up to five LUTs can be combined in different ways. Whether summing or averaging, experimenters will be rewarded with amazing results.
- **Maximum flexibility:** Thanks to the functions for saving presets, the created looks can be used or shared across hosts in DaVinci Resolve, Final Cut Pro X, Adobe Premiere, After Effects and Photoshop. In addition, all plugins offer a LUT export to use the looks in many other programs. This ensures a seamless workflow with consistent results in different media.

Availability

The Picture Instruments video plugins are available via the Picture Instruments online store: www.pic-in.de/color-grading

About Picture Instruments

Since 2009, Picture Instruments has been developing plugins and standalone software that accelerate image and video editing workflows. The release of the world's first software for automated background removal using luminance masks put PI on the map. Since then, ongoing Adobe Development partnerships have motivated the Germany based team to work tirelessly on well-structured, intuitive and visually appealing solutions.
